

# ***Chrysochromulina leadbeateri***

Phylum	Haptophyta
Class	Prymnesiophyceae
Genus	Chrysochromulina
Species	leadbeateri

## **Description**

Sub- spherical cells with two chloroplasts, two flagella and a coiling haptonema. Two layers of scales cover the cells. Outer layer with upright rim and central cross. Inner layer with 4 concentric rings, radiating ribs and a central cross.

**Morphometrics:** Flagella slightly unequal 13-16 and 16-20  $\mu\text{m}$ . Haptonema 13-24  $\mu\text{m}$ . Outer and inner layer scales 0.3-0.4  $\mu\text{m}$ .
